

CAFFEINE

COMMON CUTTING AGENT IN POWDERED FORM

.....WHAT IS IT?

Caffeine is a stimulant drug, which most people know as the active ingredient in coffee. It has a bitter taste similar to cocaine and almost looks the same!

CUTTING AGENT IN:

Cocaine, methamphetamine, or opioids!

It is primarily seen cut into cocaine since they are both stimulant drugs and look very similar.

WHAT WILL IT DO?

When consumed in its pure powdered form it will increase alertness, risk of heart problems, and can cause other drugs to vaporize at lower temperatures. It is very addictive in this form.

CAN I OVERDOSE ON CAFFEINE?

YES! Pure powdered caffeine is still a stimulant drug and overuse can cause a stimulant overdose!

SIGNS AND SYMPTOMS OF CAFFEINE OVERDOSE:

- Increased heart rate that could lead to heart attack or stroke
- Vomiting, nausea, diarrhea, disorientation, sweating, flushed face
- Seizure that could lead to death

TIPS:

- Get your drugs tested! Start with a small amount!
- Do not use alone, if you are alone you can download the Lifeguard App
- Try to rouse the client & Call 911
